#### **Processors**

**Notes:** Up to 2 of the following depending on model.

With the extension of the lifecycle of Gen10 Compute, HPE introduces a new line up of Intel Xeon Scalable Family of processors or Gen2. HPE offers both Gen1 and Gen2 processors during the introduction of this life cycle. Below are the two generations and specifications. Further details on selecting the right processor are provided in the Configuring Your System section below.

Notes:

- This table covers the public HPE Synergy Gen10 offering only.
- The 2nd digit of the processor model number "x1xx" and "x2xx" is used to denote the processor generation (i.e. 1=1st generation and 2=2nd generation)
- Intel Xeon M or L labeled processors support extended memory capacities as show up to 2 and 4.5TB per socket. However, maximum memory capacity for the server will be limited by maximum capacity DIMMs available and number of DIMM slots.

# **HPE Persistent Memory population information**

DIMMs and HPE Persistent Memory modules are installed in specific configurations based on the workload requirements of the server. Supported configurations are optimized for persistent memory capacity, volatile memory capacity, and performance.

- Persistent memory capacity—the available capacity is equal to the HPE Persistent Memory module
- capacity.
- Volatile memory capacity:
- App Direct mode—the volatile capacity is equal to the DRAM capacity (the capacity of all the non-
- HPE Persistent Memory modules installed).
- Memory mode—the volatile capacity is some or all the HPE Persistent Memory module capacity.
- Memory tier capacity—the memory tier capacity is the total capacity of all installed memory (DRAM and HPE Persistent Memory modules).

**Notes:** If the installed memory exceeds the processor capacity, the system will map out all but one DIMM channel and operate in App Direct mode. A message will be logged to the IML for exceeding capacity. To resolve the issue, remove the memory that exceeds the processor capacity.

- Performance:
  - Uses all channels to efficiently utilize processor resources.
  - Memory mode—more regular DIMMs provide a better cache ratio.

For more information, see Memory cache ratios on page 6 of this document.

## **HPE Compute Module ROM**

HPE ROM (read only memory) is now digitally signed using the HPE Corporate Signing Service. As part of the Secure Start, this signature is verified before the flash process starts, reducing accidental programming and preventing malicious efforts to corrupt system ROM.

HPE ROM provides for essential initialization and validation of hardware components before control is passed to the customer-installed operating system. The ROM also provides the capability of booting from various fixed media (HDD, CD-ROM). HPE ROM performs very early configuration of the video controller, to allow monitoring of initialization progress via an attached monitor. If configuration or hardware errors are discovered during this early phase of hardware initialization, suitable messages are now displayed on the connected monitor. Additionally, these configuration or hardware errors are logged to the Integrated Management Log (IML) to assist in diagnosis.

HPE Synergy Compute ROM is used to configure the following:

- Processor and chipset status registers
- System memory, memory map, and memory initialization
- System hardware configuration (integrated PCI devices and optional PCIe cards).
- Customer-specific BIOS configuration using the UEFI System Utilities.

#### HPE Server UEFI/Legacy ROM

Unified Extensible Firmware Interface (UEFI) is an industry standard that provides better manageability and more secured configuration than the legacy ROM while interacting with your server at boot time. HPE ProLiant Gen10 servers have a UEFI Class 2 implementation and support both UEFI Mode (default) and Legacy BIOS Mode.

**Notes:** The UEFI System Utilities tool is analogous to the HPE ROM-Based Setup Utility (RBSU) of legacy BIOS. For more information, please visit <a href="http://www.hpe.com/servers/uefi">http://www.hpe.com/servers/uefi</a>

UEFI enables numerous new capabilities specific to HPE Synergy Compute Modules such as:

- Secure Boot and Secure Start enable for enhanced security
- Operating system specific functionality
- Support for > 2.2 TB (using GPT) boot drives
- USB 3.0 Stack
- Embedded UEFI Shell
- Mass Configuration Deployment Tool using iLO RESTful API that is Redfish API Conformant.

- PXE boot support for IPv6 networks
- Workload Profiles for simple performance optimization

#### **UEFI** Boot Mode only:

- TPM 2.0 Support
- NVMe Boot Support
- Platform Trust Technology (PTT) can be enabled.
- iSCSI Software Initiator Support.
- HTTP/HTTPs Boot support as a PXE alternative.
- Boot support for option cards that only support a UEFI option ROM

#### **Notes:**

- For UEFI Boot Mode, boot environment and OS image installations should be configured properly to support UEFI.
- UEFI FIO Setting (758959-B22) can be selected to configure the system in Legacy mode in the factory for your HPE Synergy Gen10 Server.

## Security

Newest forms of security based on iLO 5 features.

- Secure Start, with hardware root of trust.
- HPE hardware designed logic in iLO chip validates iLO firmware burned in chip.
- iLO then validates system/compute ROM firmware for digital signature.
- iLO completes the chain of trust.
- ROM validates option ROMs and OS Bootloader via UEFI Secure Boot.

#### Standard security features

- Power-on password
- Administrator's password
- Keyboard password (QuickLock)
- HPE iLO Management On System Management Chipset with SSL encryption, Secure Shell version 2, Advanced Encryption Standard (AES) and Triple Data Encryption Standard (3DES) on browser, CLP and XML scripting interface, AES and RC4 encryption of video
- External USB port enable/disable
- Network server mode
- Serial interface control
- TPM (Trusted Platform Module) 1.2 or 2.0 option
- Advanced Encryption Standard (AES)
- Intel® Advanced Encryption Standard-New Instructions (AES-NI)

#### **About Trusted Platform Module**

Trusted Platform Module (TPM) is a separate processor that monitors the system state. TPM is a passive component needing to be updated and not able to lock down any component in the system except access to its own memory. It also provides some cryptographic operations - among them: creating RSA keypairs and working with them.

The first verification of signatures happens by code on the CPU, which can be intercepted and replaced. Emulating a "properly" booted system is possible by sending the right values to the TPM.

The bootblock, the part of the firmware that contains the first instructions executed by the CPU, comes first and anchors the root of trust. But if you can't trust the bootblock to send a truthful state into the TPM, this is a vulnerability.

#### **About HPE Silicon Root of Trust**

As soon as the server is powered on and the iLO firmware comes alive, it looks into the silicon for the immutable fingerprint that verifies all the firmware code is valid and uncompromised. Over a million lines of firmware code run before the operating system starts, making it vital to confirm that all server essential firmware is free from malware or compromised code.

During operation of the server, HPE has a new technology that conducts run-time firmware validation that checks the firmware stored in the server. At any point, if compromised code or malware is inserted in any of the critical firmware, an iLO audit log alert is created to notify the customer that a compromised has occurred. It is achieved by storing iLO 5 and UEFI firmware in non-volatile Flash memory which is thoroughly scanned at regular user determined intervals. The contents of the firmware stored in memory must be exactly right, down to the individual bit, or else it is flagged as compromised. See the iLO 5 QuickSpecs for recovery processes.

#### Warranty

This product is covered by a global limited warranty and supported by HPE Services and a worldwide network of HPE Authorized Channel Partners resellers. #### **HPE Virtual Connect**

HPE Synergy composable fabric delivers high performance and composability for the delivery of applications and services. The composable fabric is based on primary/satellite architecture.

The HPE Virtual Connect SE 40Gb F8 Module, primary module, based on composable fabric is designed for Composable Infrastructure. Its disaggregated, rack-scale design uses a primary/satellite architecture to consolidate data center network connections, reduce hardware and scales network bandwidth across multiple HPE Synergy Frames.

The primary module contains intelligent networking capabilities that extend connectivity to satellite frames through Interconnect Link Modules. This eliminates the need for a top of rack switch and substantially reduces cost. The reduction in components also simplifies fabric management at scale while consuming fewer ports at the data center aggregation layer.

The HPE VC SE 40 Gb F8 modules eliminate up to 95% of network sprawl at the compute module edge with one device that converges traffic inside frames and directly connects to external LANs. Each redundant pair of Virtual Connect modules provide eight adjustable downlink connections (six Ethernet and two Fibre Channel, or eight Ethernet) to dual-port 10 Gb and in case of 20 Gb Converged Network Adapters 16 adjustable downlinks connections 14 Ethernet and two Fibre Channel) on each compute module. Up to six uplinks using QSFP+ interfaces are available for connection to upstream Ethernet switches. Including splitter cable up to 24 uplinks are available for connection to upstream Ethernet and Fibre Channel. The HPE VC SE 40 Gb F8 modules avoid the confusion of traditional and other converged network solutions by eliminating the need for multiple Ethernet and Fibre Channel switches, extension modules, cables and software licenses. Also, Virtual Connect wire-once connection management is built-in enabling compute modules adds, moves and replacement in minutes instead of days or weeks. The Primary/Satellite disaggregated architecture removes fixed ratios of interconnects in every frame and allows extending networking resources pool for Virtual Connect to satellite frames.

# **Factory Integrated Models**

This section lists some of the steps required to configure a Factory Integrated Model (configure-to-order or CTO compute module). To ensure only valid configurations are ordered, Hewlett Packard Enterprise recommends the use of an Hewlett Packard Enterprise approved configurator. Contact your local sales representative for information on CTO product offerings and requirements.

Notes:

- Not all models are available in all regions. Check with your local country Hewlett Packard Enterprise offices for availability.
- Configure-to-order compute modules must start with a CTO Compute Module.
- FIO indicates that this option is only available as a factory installable option.
- All Factory Integrated Models will be populated with sufficient drive blanks based on the number of initial drives ordered with the server.
- The Factory integrated w/o drive bay model ships with a grill blank in place of the drive cage and drive backplane.

#### **Notes:**

- Boot Devices Advisory for USB/SD with VMware 7.0 U2 and beyond:
  - o Background:
    - VMware; at 7.0 U1, made changes in the Boot/Store format to better manage IO growth. The format
      change of the ESX-OSDATA boot data partition was from FAT to VMFS-L. The new format allows for
      faster IO to the scratch partition, allowing an overwhelming level of IO traffic to flow and some Hosts
      may become unresponsive or boot bank not found on boot devices like USB/SD cards.
  - o Issue:
    - The host (USB/SD with ESXi) goes into an unresponsive mode due to "Bootbank cannot be found in the path" and the boot device is in an APD (All Paths Down) state. In some cases, the Host goes to non-responsive state and shows disconnected from VCenter.
  - o Options for HPE Customers @ Next Update:
    - When the customer decides to upgrade to VMware Next or beyond ESXi 7.0 U2c Update Release,
       VMware will deprecate any USB/SD drive and already recommends the customer use alternative High Endurance SSD's for "Boot & Store partitions.
  - HPE Synergy recommends that customer move to alternative Boot & Store solutions as well, examples below:
    - With any SY480 Gen10 move from USB/SD Boot & Store devices to HPE 2x Drive Cage solution(P36675-B21), with HPE Smart Array P204i-c SR Gen10 12G SAS Modular Controller(804424-B21) Smart Array or HPE Smart Array E208i-c SR Gen10 Ctrlr (823852-B21) and additional Drives.
    - With SY480 Gen10 Plus servers you have the options to move from USB/SD Boot & Store devices to an HPE NS204i-d SY Gen10 Plus NVMe PCle3 M.2 OS Boot Device (w/ 2x M.2 NVMe 480GB Drives) and/or
    - HPE 2x Drive Cage solution (P36675-B21), with HPE Smart Array P204i-c SR Gen10 12G SAS Modular Controller (804424-B21) Smart Array and additional SSD Drives. Options for Gen10 Plus and Gen10.
- CTO SKUs are designed for specific use case fits.
- This information applies to factory CTO configurations, Field upgrades may differ depending on field configurations.
- Backplane in the chassis description refers to the type of controller backplane in the Drive Cage modules.
- Standard Backplane CTO Chassis is designed for flexible use of the Compute Module for most workloads. This SKU may use the SATA Board Option, or Smart Array options. This SKU may also use the Mezzanine P416ie-m for connection to the HPE D3940 Storage Module, but no links to local front drive.
- The Drive-Less CTO option is intended for stateless on SAN/NAS boot use cases and still supports mezzanine Smart Array for Synergy D3940 Storage Modules. Additionally, this model supports adding the M.2 Adapter for dual M.2 drive options. This SKU may also use the Mezzanine P416ie-m for connection to the HPE D3940 Storage Module.
- The Premium Backplane CTO option supports NVMe drives directly in the Front Drive cage. SATA/SAS drives may
  optionally be supported in the Front Drive Cage in combination with the D3940 Storage Module with a mezzanine Smart
  Array P416ie-m and addition SAS Cables that connect the mezzanine card directly to the Premium Backplane on the Local
  Drive Cage
- <sup>1</sup>HPE offers multiple Trade Agreement Act (TAA) compliant configurations to meet the needs of US Federal Government customers. These products are either manufactured or substantially transformed in a designated country.

#### ErP LOT 9 (Commission Regulation (EU) 2019/424): An Overview

The ErP Lot 9 directive is associated with the EU circular economy initiative and will have an impact on energy and disclosure requirements for servers and storage products. The intent of the ErP Lot 9 initiative is to reduce the environmental footprint of server and storage products by reducing energy usage and allowing server and storage systems to be more efficiently reused and recycled. Energy requirements include power supply efficiency, idle power limits, and active power efficiency. The ErP Lot 9 regulations will go into effect for all products placed on the market in the EU member countries after March 1, 2020. EU countries include Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom (status TBD).

A summary of the HPE Synergy 480 Gen10 requirements are listed here. Configuration rules for compliant products are included in the HPE order entry system. HPE Factory order has rules set internal to avoid misconfiguration of any system intended for Lot9 country.

#### HPE SY480 Gen10

- For ErP Lot9 all 2 processor configurations are fully compliant.
- For any 1 Processor configuration 8GB memory solution will be removed from HPE Order System so that all other configurations meet compliance.
- There are no additional memory, drive, or power supply restrictions for this product.

#### Intel Xeon-Bronze Processors

#### **Notes:**

- All processors within any single compute module must be identical.
- HT indicates that the processor model supports Intel® Hyper-Threading Technology.
- Turbo indicates the maximum potential frequency when using Intel® Turbo Boost Technology. The frequency boost increment is dependent on the processor SKU and the number of active cores. In general, a higher boost increment is obtained when fewer cores are active.
- DDR4 speed is the maximum memory speed of the processor. Actual memory speed may depend on the quantity and type
  of DIMMs installed.
- Supports 1 or 2 processors. Mixing different processor models is not supported.
- For the Intel® C621 Chipset Scalable Family Processors come with model numbers to indicate SKU level, processor generation, SKU model, integrations-optimizations or memory capacity. (i.e., HPE Synergy 480/660 Gen10 Intel Xeon-Gold 6136; 6 is the SKU Level, 1 or 2 is the processor generation, 34 is the SKU model, m indicates memory SKU)
- The HPE Synergy 480 Gen10 Compute Module includes three I/O mezzanine connectors. A processor must be installed in processor slot 1 for access to mezzanine connectors one and three (mezzanine connectors 1 and 3). A processor must be installed in processor slot 2 for access to the mezzanine connector two (mezzanine connector 2).
- The processor model as well as the memory configuration determines the maximum speed memory can operate. Please see the see the "Memory" section later in this document.
- Bronze 3200 Series Supports 2 socket (Synergy 480 Gen10) compute module only, 2 Socket supports 2UPI, supports
   6-Channel DDR4 @ 2133MT/S depending on processor and memory selected, providing up to 1TB memory capacity. Intel AVX-512(1x 512-bit FMA), 48 lanes PCIe 3.0, standard RAS supported.

# **Notes:**

- The TPM (Trusted Platform Module) is a microcontroller chip that can securely store artifacts used to authenticate the server platform. These artifacts can include passwords, certificates and encryption keys. Windows® BitLocker™ Drive Encryption (BitLocker) is a data protection feature available in Windows Server® 2012. BitLocker leverages the enhanced security capabilities of a Trusted Platform Module (TPM) version 1.2. The TPM works with BitLocker to help protect user data and to ensure that a server running Windows Server 2012 has not been tampered with while the system was offline.
- HPE Synergy OS pre-installed units will come with the partition required for TPM deployment.
- The TPM key is unique to every TPM deployed server and must be retained. Misplacing or losing the key could result in data loss.

# Memory

# **Memory Subsystem Architecture**

Each processor socket contains six memory channels that support two DIMMs each for a total of 12 DIMM per installed processor or a grand total of twenty-four (24) DIMMs for the compute module.

# **Memory Population Rules and Guidelines**

- A minimum of one DIMM is required per processor.
- Install DIMMs only if the corresponding processor is installed.
- If only one processor is installed in a two processor system, only half of the DIMM slots are available.
- DIMM sizes can be mixed in channel. To maximize performance, it is recommended to balance the total memory capacity between all installed processors and to load the channels similarly whenever possible.
- LRDIMM and RDIMMs are all distinct memory technologies and cannot be mixed within a compute module.
- DIMMs of different speeds may be mixed in any order; the compute module will select a common optimal speed.
- The maximum memory speed is a function of the memory type, memory configuration, and processor model.
- The maximum memory capacity is a function of the memory type and number of installed processors.
- HPE memory from previous generation servers is not compatible with the HPE Synergy 480 Gen10 Compute Module.

To realize the performance memory capabilities listed in this document, HPE Smart Memory is required. For additional information, please see the **HPE DDR4 Smart Memory QuickSpecs**

#### Population guidelines for HPE NVDIMM-Ns in HPE Synergy 480 Gen10 compute modules

A single NVDIMM-N remains available for Intel Xeon Scalable Family Generation 1. (not available for Generation 2 processors) Since HPE NVDIMM-Ns are designed to unleash maximum system performance, systems using HPE NVDIMM-Ns should have one HPE Smart Memory DPC to provide maximum memory performance (i.e., six HPE Smart Memory DIMMs per processor). One to six HPE NVDIMM-Ns (based on persistent memory capacity and performance needs) should then be added as described in Table above. The HPE Smart Storage battery is connected to all DIMM slots and supports a maximum of twelve HPE NVDIMM-Ns across all CPUs.

**Table:** Population guidelines for HPE NVDIMM-Ns with six HPE Smart Memory DIMMs attached to CPU 1 in HPE Synergy 480 Gen10 compute modules

- R = Regular DIMM (i.e., an HPE Smart Memory DIMM),
- N = HPE NVDIMM-N.
- 1 = CPU 3 is only available on HPE Synergy 660 Gen10 compute modules.
- 2 = Persistent memory capacity assumes that 16 GiB NVDIMM-Ns are used.
- 3 = Nominal persistent memory bandwidth assumes that the system is running at 2667 MT/s, NVDIMM-N interleaving is enabled, and that no bandwidth is being used for the HPE Smart Memory DIMMs.
- 4 = Non-interleaved—NVDIMM-N interleaving should be disabled for this configuration.

#### Key:

- R = Regular DIMM (i.e., an HPE Smart Memory DIMM),
- N = HPE NVDIMM-N.
- 1 = CPU 4 is only available on HPE Synergy 660 Gen10 compute modules.
- 2 = Persistent memory capacity assumes that 16 GiB NVDIMM-Ns are used.
- 3 = Nominal bandwidth assumes that the system is running at 2667 MT/s and NVDIMM-N interleaving is enabled, and that no bandwidth is being used for the HPE Smart Memory DIMMs.
- 4 = Non-interleaved—NVDIMM-N interleaving should be disabled if five NVDIMM-Ns are used.

Although Hewlett Packard Enterprise recommends that HPE NVDIMM-Ns be used with six HPE Smart Memory DIMMs, they may also be combined with smaller quantities of HPE Smart Memory DIMMs as described in Tables 19 to 22 if regular memory performance is not as important or if larger persistent memory capacity is needed.

#### Population guidelines for HPE Persistent Memory

For data-intensive workloads where latency and capacity are key considerations, HPE Apollo, HPE ProLiant, and HPE Synergy servers deliver faster data access at a reasonable price point when equipped with HPE Persistent Memory 128, 256, or 512 GB modules featuring Intel Optane DC Persistent Memory. This new persistent memory offering, based on phase-change memory technology, must be included alongside HPE Smart Memory DIMMs.

DIMMs and HPE Persistent Memory modules are installed in specific configurations based on the workload requirements of the server. Supported configurations are optimized for persistent memory capacity, volatile memory capacity, and performance. Persistent memory capacity—the available capacity is equal to the HPE Persistent Memory capacity.

#### Volatile memory capacity

- App Direct (1 LM) mode—the volatile capacity is equal to the DIMM capacity.
- Memory (2 LM) mode—the volatile capacity is some or all of the HPE Persistent Memory capacity.

#### Performance

- Uses all channels to efficiently utilize processor resources.
- Memory (2 LM) mode—more regular DIMMs provide a better cache ratio.

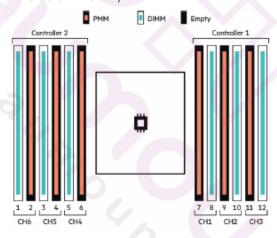

DIMN	DIMMs and HPE Persistent Memory modules can be installed in the server in the following configurations:											
	Slot 1	Slot 2	Slot 3	Slot 4	Slot 5	Slot 6	Slot 7	Slot 8	Slot 9	Slot 10	Slot 11	Slot 12
6+6	D	Р	D	Р	D	Р	Р	D	Р	D	Р	D
4+6	D		D	Р	D	Р	Р	D	Р	D		D
2+8	Р		D	D	D	D	D	D	D	D		Р
2+6	D		D		D	Р	Р	D		D		D
2+4	Р		D		D			D		D		Р
1+6	D		D		D			D		D	Р	D

- P = HPE Persistent Memory
- D = DIMMs

Notes: P00918-B21—HPE 8GB 1Rx8 2933 RDIMM does not support pairing with HPE Persistent Memory.

### 6+6 configuration

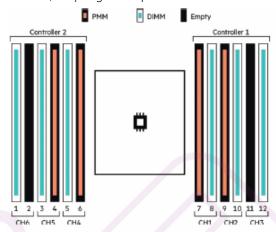

This configuration is also referred to as a 2-2-2 configuration, based on the number of modules populated per channel, per memory controller. This configuration is symmetric and uses all slots. It provides the best bandwidth for both DRAM DIMMs and HPE Persistent Memory, using all the channels and pins on the processor. Since DRAM DIMMs and HPE Persistent Memory modules share channels, there might be some competition for access; the HPE Persistent Memory module will slow down the DRAM compared to a system without HPE Persistent Memory.

HPE Persistent Memory capacity up to 3 TB using 512 GB modules and DIMM capacity up to 768 GB using 128 GB DIMMs

#### 4+6 configuration

This configuration is also referred to as a 2-2-1 configuration (that nomenclature does not consider whether there are two HPE Persistent Memory modules or one DIMM and one HPE Persistent Memory module in a channel). By using all channels, this configuration provides the best performance for DIMMs. It offers less capacity for HPE Persistent Memory. Since DIMMs and HPE Persistent Memory modules share four channels, they might compete for access.

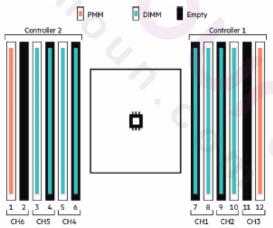

HPE Persistent Memory capacity up to 2 TB using 512 GB modules and DIMM capacity up to 768 GB using 128 GB DIMMs

#### 2+8 configuration

This configuration is also referred to as a 2-2-1 configuration (that nomenclature does not consider whether there are two DIMMs or one DIMM and one HPE Persistent Memory module in a channel). This configuration does not support Memory (2 LM) mode because the capacity of the DIMMs is likely too large to use as a cache for the small number of HPE Persistent Memory modules. This configuration offers the largest regular DIMM capacity but only offers 66% of the possible DIMM bandwidth, since DIMMs are not installed on all channels.

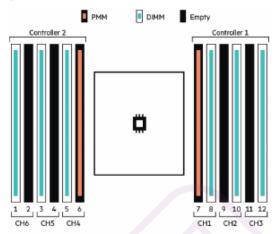

**Notes:** Only App Direct mode is supported with 2+8 configuration.

HPE Persistent Memory capacity up to 1 TB using 512 GB HPE Persistent Memory and DIMM capacity up to 1 TB using 128 GB DIMMs

#### 2+6 configuration

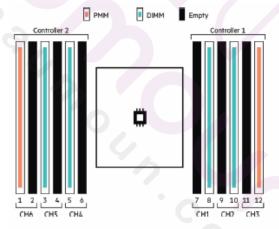

This configuration is also referred to as a 2-1-1 configuration. Two channels are shared, so there is still some competition between DRAM and HPE Persistent Memory traffic.

HPE Persistent Memory capacity up to 1 TB using 512 GB HPE Persistent Memory and DIMM capacity up to 768 GB using 128 GB DIMMs

# 2+4 configuration

This configuration is also referred to as a 1-1-1 configuration. Although HPE Persistent Memory traffic stays out of the way of DIMM traffic, the regular DIMMs are only interleaved four ways and provide less bandwidth than a +6 configuration.

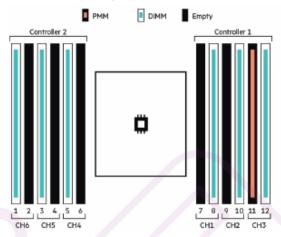

HPE Persistent Memory capacity up to 1 TB using 512 GB HPE Persistent Memory and DIMM capacity up to 512 GB using 128 GB DIMMs

#### 1+6 configuration

This configuration is also referred to as a 1-1-1 asymmetric configuration. It offers the smallest HPE Persistent Memory capacity. This configuration does not support memory (2 LM) mode because 2 LM mode requires symmetrical population under each memory controller.

Notes: Only App Direct mode is supported with 1+6 configuration.

HPE Persistent Memory capacity up to 512 GB using 512 GB HPE Persistent Memory and DIMM capacity up to 768 GB using 128 GB DIMMs

#### **ErP Lot9**

The European Parliament (ErP) is responsible for setting the ecological standards for products that are imported into the EU. The European Parliament Commission Regulation 2019/424 (also known as the ErP Lot 9 regulation) are a new set of product standards that deal with servers and data storage devices and goes into effect on March 1, 2020. Products that are not compliant with Lot 9 requirements cannot be imported into the European Union after March 1, 2020. For details see Tech Specs section of this document. See Configure to Order section for details on configurable options.

#### Environment-friendly Products and Approach - End-of-life Management and Recycling

Hewlett Packard Enterprise offers **End-of-life product return, Trade-in, and Rrecycling programs**, in many geographic areas, for our products. Products returned to Hewlett Packard Enterprise will be recycled, recovered or disposed of in a responsible manner.

The EU WEEE directive (2002/95/EC) requires manufacturers to provide treatment information for each product type for use by treatment facilities. This information (product disassembly instructions) is posted on the Hewlett Packard Enterprise web site. These instructions may be used by recyclers and other WEEE treatment facilities as well as Hewlett Packard Enterprise OEM customers who integrate and re-sell Hewlett Packard Enterprise equipment.
