

PRODUCT BRIEF

AT A GLANCE

Reduced Risk Profile

- Protect network storage devices from hosting and distributing malware.
- Defend against living-off-the-land attacks where threat actors could use unprotected storage to stage their malware.
- Track files globally and apply reputation intelligence to NAS.

Industry-Leading Protection

- File Reputation Service powers fast, scalable, and reliable anti-malware scanning.
- Advanced machine learning provides strong protection with a low false-positive rate.
- Disarm feature that removes threats from potentially malicious content embedded in incoming documents.

Broad Application, Storage, and Platform Support

- Incorporate malware and threat detection technologies into NAS devices with broad device support from NAS vendors.
- The high-performance verdict engine is highly scalable to accommodate the most demanding NAS environments.
- Two license models (per-user and per-terabyte) provide deployment flexibility for sizing and architecture without additional licensing charges.
- Secure storage is a critical aspect of keeping your enterprise safe. Important business data, tools, and utilities residing on storage devices need malware protection, even if backed up or archived.

Symantec® Protection Engine

For Network Attached Storage 9.2

Scalable, High-Performance Threat Detection Services

Symantec® Protection Engine (SPE) for Network Attached Storage 9.2 provides scalable, high-performance threat detection services to protect valuable data stored on network attached storage (NAS) devices. This product improves scanning performance and detection capabilities to protect against multi-blended threats. SPE includes industry-leading Symantec malware protection with Symantec File Reputation Service technology and advanced machine learning to deliver fast, scalable, and reliable content scanning services. This product helps organizations protect their data and storage systems against the ever-growing malware threat landscape.

Symantec LiveUpdate automatically updates malware definitions and engines without interrupting scanning. You can also centrally distribute definitions to multiple deployments with the included Symantec LiveUpdate Administrator application.

Platform support spanning Microsoft Windows, Red Hat Enterprise Linux, Rocky Linux, and CentOS ensures that you can take advantage of market-leading malware detection wherever you need it (Windows-only for NetApp).

Many storage vendors certify their platforms with SPE for Network Attached Storage, including NetApp, Hitachi, Dell, and Nutanix, providing you with scalable and secure integration.

SPE for Network Attached Storage Enhancements

Flexible Management Options

- SPE management is simplified through a new central console. This modern Windows-based application provides the following functionality:
 - Easily manage SPE scanners and policies
 - Create groups for scanner pools with common policies
 - View status and statistics on a dashboard
 - Centralized view and management of scanner quarantine
 - Centralized reporting and license management
- On-premises user interface for one-to-one local management
- Command-line management for on-demand scalability with script-based configuration
- Role-based access controls separate API functions for scanning tasks vs administrative tasks

Increased Protection

- Symantec STARGate integration
- Disarm feature:
 - Removes DDE, JavaScript, macros, and embedded files from Office and PDF documents
 - Ability to use Disarm in log only mode including more detail on the nature of the active content

Increased Usability and Productivity

- Support for large files > 2 GB

New Platform Support

- Containerized SPE with Helm Charts
- Windows 2022
- Rocky Linux 8.7 and 9.3
- Amazon Linux 2

Key Features

- Rich, easy-to-use centralized console for managing and monitoring all instances, either on-prem or in the cloud. The console provides scan statistics, system information, policy control, and quarantine management.
- Modern deployment option: SPE Docker with Helm, which supports Kubernetes and Red Hat OpenShift. The one-click Helm deployment simplifies the installation, scanning, and management experience; and allows for elastic scaling.
- Enhanced REST services for SPE scanners: management and scanning.
- Advanced machine learning capability.
- Syslog support.
- Out-of-box support for NetApp filers.
- Detect both known and unknown malware using Symantec File Reputation Service technology.
- Mobile data scanning capabilities for APK files.
- AV Microdefs for smaller definition updates.
- Reconstructs Office 2003/2007+ and PDF documents after removing active embedded content (meaning Macro and JavaScript).
- Supports secure ICAP for the NAS devices that support it.
- Specify both time and time ranges in LiveUpdate Triggers.

Benefits

- Protect applications and storage from hosting and distributing malware
- High-performance scanning of files for viruses, malware, spyware, worms, and Trojans
- Easily integrates with third-party NAS devices through ICAP or RPC (NetApp only)
- Delivers statistical and detailed activity reports that can be viewed in HTML or exported to CSV format
- Delivers consumption reporting to show how resources are being utilized
- Improved alerts allow event triggers to be sent through email or SNMP alerts when a predetermined number of events occur
- Improved logging captures and displays more event details

Advantages

- Leverages the next generation of Symantec threat detection technology
- Scalable solution with the ability to run multiple SPE for NAS servers in parallel and utilize the most popular load-balancing solutions
- Support for multiple operating systems and mixed-mode NetApp deployments
- Backed up by the Symantec Security Response organization
- Supports Rapid Release virus definitions

System Requirements

Scanner Supported 64-Bit Operating Systems

- Microsoft Windows 2016, 2019, and 2022
- Red Hat Enterprise Linux 7.x, 8.x, and 9.3
- CentOS 7.x, 8.0
- Rocky Linux 8.7
- SUSE Linux Enterprise Server 15.3 (64 bit)
- Amazon Linux 2

SPE Console Supported Operating Systems

- Microsoft Windows Server 2019 and 2022
- Microsoft Windows 10 and 11

Supported Virtualization Systems

- VMware® vSphere Hypervisor 5.5 or later
- Microsoft Hyper-V Server 2016 and 2019
- Kubernetes, OpenShift, and Docker

Minimum Hardware Configuration

- Intel or AMD server-grade single processor quad-core system or higher
- 16 GB RAM or higher, (24 GB if using URL Insight)
- 40 GB hard disk space minimum (60 GB hard disk space if using URL filtering)
- One NIC with a static IP address running TCP/IP
- 100 Mb/s Ethernet link (1 Gb/s recommended)
